[Please write your comments in this box]Home owner and hydro electricity user and Fortis gas user

Subject: Two tier electricity rates

I am against two level pricing for electricity you want me to stop burn nat gas as carbon emission but if I put heat pump or geothermal heat pump you want to penalize me. If I use electric car you want more. What do you want green or just excuse for more money. I see massive compressors for cng pipeline I see massive export electricity to USA. Profit for bc gov I see massive dividend from bhydro to gov but massive off book debt. Bhydro looks like profit but actually loss to justifying dividend. I see site c power just for cng compressors to export gas to emit carbon elsewhere. And you want me to conserve. The best way I will conserve is like birds and fly south turn power off house drain water pipes and come back spring when heating season is over. Look Australia demand pricing look ontario energy poverty. This is just more ways government suck revenue from citizen's and look good. oh look at us we conserve it is about money and profit that is all.

You want me green help me do it and not gouge electrify rates. I watch old hydro dams spill water so ipp can generate at higher cost becaues tr'ansmission does not have enough capacity.

Oh yes we purchase bulk electricity from Alberta coal power on cheap store it then gouge me at firm rates and say we must conserve power it is just a business. Stiff owners power company bc taxpayer to sell for big profit USA that is conservation in BC.

Sorry my spelling this phone not easy to type

No two tier pricing until you stop export to USA if you want me to stop carbon emissions. Help me transition to clean power without price penalty.

Kevin Thompson
