Comment:

Build it and they will come! How about having a dedicated line from the site C dam to power a succession of charging stations along the entire length of the Trans Canada through BC? They should be equipped with a mechanism to accept credit cards, get charged a rate that would include a reasonable profit for BC Hydro, plus be placed where they won't get mowed over by out of control vehicles. It was recently discovered that the exhaust from vehicles (carbon monoxide) passes through the lungs into the blood stream and causes hardening of the arteries and inflammation of the heart. California has passed legislation to eliminate all gas vehicles, in increments, for its residents in 10 years. Electric cars are the way of the future. The sooner the better!
