Comment:

Hello my name is Chloe. My grandparents own a cabin on Kalamalka lake and I have been going there my whole life. It is one of my favourite places to go on vacation and I have made many memories there with my family. I would like to see this project to proceed because having electricity would be beneficial in many ways. Having electricity would make everything more convenient and comfortable for my grandparents and everyone else who owns or regularly visits a property in this growing community. Having to go back and forth to our generator, which is in a shed in the driveway above the cabin, every time we need power for something is an inconvenience for everyone. Many simple everyday necessities we require such as warming up food, turning on lights, using hot water, and running fans to stay cool in the summer, require electricity. Then, when you look at the environmental side of having electricity you must acknowledge that generators cause noise and air pollution in a environment home to wildlife and in the middle of nature. I am a big supporter of sustainable living and protecting our planet and electricity would be an effective step towards sustainability in this area. We're simply asking for access to electricity, a utility that millions already enjoy, including the residents that live right across the lake from us which really isn't that far. Please help us comfortably enjoy the time we spend at our cabin and help us better respect the land and nature we are very grateful for. Thank you for taking the time to read my letter.
