Subject: 7 stated purposes for Site C Energy

Dear Commissioners,

This information clearly demonstrated that proposed Site C was a project with no purpose.

From 2010 up to 2014 the Liberal government desperately attempted to convince the taxpayers of BC that this huge expenditure of public funds was justified.

Why was there no critical analysis from the bond rating agencies or from the press.

The inconsistencies and attempts at deceit were so obvious.

Electrical demand has been static to diminishing from 2006 to 2017.

The silence is deafening.

Regards,

Arthur

During the previous 4 years (2010 to 2014) there has been 7 (seven) stated purposes for the use of Site C energy.

1. Export for California as clean and green energy.
2. Proposed Site C was intended to power 410,000 new homes in British Columbia.
No justification was given for this idea.
3. This project was supposed to power the Horn River basin
4. It was then determined that the energy from the proposed C would be used to power LNG plants
5. On the opening day of the Hearings, MLA Pat Pimm stated that the energy could be used to power industry
6. proposed Site C is intended to power 450,000 phantom homes within British Columbia.
7. The last one was offered by BC Hydro staff on the last day of the Panel Hearings.
Staff speculated that this surplus energy could be exported to California.
