Thank you for looking further into the Site C Dam. I know you've heard this before but it bears repeating.

There is already a large Hydro electric generation system of dams throughout BC. I was born and raised in Revelstoke and my family had property on the Upper Arrow lake which was flooded when the Keenleyside Dam was constructed. The series of dams on the Columbia River were built in the 60's and 70's and I'm sure could be upgraded and made more efficient with current technologies. Rather than flood more land and expropriate people's homes and change lives forever, please just upgrade the existing dams. And, let's start using more solar power and wind power. Building these huge destructive mega projects have huge and largely negative impacts on people, plants and animals. Let's get creative and move into the 21st Century.

Sincerely,

Laura Jones
