I support Site C. With the World moving to reduce Emissions and the electrifying of the Auto Industry green clean power Site C will provide is needed. May not be needed today as this present Coalition Government is claiming and hoping you support this claim, but by the time it Site C will be completed we will need it. From the direction our Province is going with

development of our Oil and Gas fields and LNG we will need more than one Site C. The Power will be needed and project has gone beyond the point of cancellation so in my opinion it is in the best interests of this Province to Continue to build Site C.
