Subject: Cite C Dam
Date: Thursday, September 21, 2017 10:37:26 PM

Hi!

There is one thing I feel that is being over looked on the building of the Cite C hydro dam. That is our most important resource, fresh water, this dam will add a lot of fresh water storage, not near enough to meet our future needs, but will help. So if we can get Hydro to pay for this storage so much the better, right?? It's sad that we are not building a lot more dams, in areas in our mountains that are a natural for this, as we are going to need untold fresh water, in the not to distant future. Just as the Cite C hydro is going to be needed, the way our Province is growing, as there won't be any hydro generated for at least another 7 or 8 years. In the mean time how are we going to meet the carbon objective, with so much hydro still being generated with diesel and natural gas. I don't think your foolish enough to try and tell me there's no carbon emission from those stacks on natural gas hydro plants. If you don't believe me, just take a look at them on a cold morning, and see for yourself. Anyway fresh water storage is just as important or maybe even more so, then the hydro that will be generated, at Cite C right???
