Subject: SiteC Inquiry - Make a Submission

First Name: Peter
Last Name: Calder

Organization: Retired Project Director - major energy & mining projects including BCHydro
Comment: The ToR (b) & (c) as assessed to date only considers full suspension & termination. This should be expanded to partial suspension/termination of the current project scope to include reducing the scope of the installed generation & related facilities. This was common practice on most of BCHydro's past major developments & provided an opportunity to lower the initial capital costs, speed up project completion & increase the load factor on the initially installed generating units.

This e-mail was sent from a comment form from the Site C Inquiry (<http://www.sitecinquiry.com>).
