BCUC INQUIRY RESPECTING SITE C

F 186-1

Date: September 27, 2017

Subject: Submission on Site C Dam

Dear British Columbia Utilities Commission,

Even with the money already spent, i believe Site C to be an enormous mistake.

In the coming years we will be powering our cars with electricity yes, but much more efficiently than we could have expected. We will not be compressing natural gas.

Why are we not generating power by wind in the very windy Straits of Juan de Fuca.? Why not solar in sunny Okanogan? Why not tidal power at Campbell River or the Central coast?

Lets move to alternates. Hydropower is neither Green House gas free(because of concrete) or environmentally friendly.

Sincerely,  
Al Whitney
