BCUC INQUIRY RESPECTING SITE C

F 199-1

Date: September 28, 2017

Dear BCUC,

It seems the preliminary report identifies the total spent so far on site c as \$2.1b and an extra \$1.1b to terminate the project. Since the entire project cost is \$8.3b then isn't this a savings of \$5.1b if the project is terminated? BC Hydro's demand analysis appears overstated so it is likely we don't even need this extra power, especially if LNG projects do not materialize.

What about the environmental cost? I see no analysis of this. Why not? It almost seems as the environment isn't even a consideration, but it actually should be front and center.

BC Hydro can do a much better job of promoting energy conservation. Let's cancel site c.

Thank You.
