BCUC INQUIRY RESPECTING SITE C

F 218-1

Date: October 01, 2017

Preliminary report highlights need for more electricity to get off all carbon fuels. So British Columbia needs long term 100 year life sources of electricity which Site C provides and no other renewable electric generation can do this as cheaply. Solar last 20 years needing replacing 5 times to be same as Site C - Wind power last 25 years needing replacing 4 times so both are hopeless on cost front let alone reliability and low availability. Please keep BC competitive with long term cheap hydro power.
