As a nation we cannot afford to create even more problems than we already have . In my opinion we need to fix the problems that we already got . The planet earth is 73% water and we have a water shortage . The capital of B.C. Victoria , has been dumping raw sewage into our ocean for so long it is unamaginable . If the government was to receive a report card they would fail on all their portfolio's.If you ask me the rich people need to spend our money to the agriculture deficit that they have created .
