

Name: David Perrella

BCUC INQUIRY RESPECTING SITE C

F 248-1

Date: October 06, 2017

It is clear that the preliminary report is inconclusive on many of the questions being asked. I find it very troubling that the government, representing the taxpayers, is even considering a halt or cancellation to this project. The cancellation would be a wasted \$2 billion. This review is costing us. The delays being imposed is costing us. This review is not required! It should be stopped! We should proceed with this project in the most cost efficient manner to provide clean electricity for many years to come. Clean (zero emission) electricity will be an increasingly valuable commodity. Site C is a good investment for our province. Please stop this review and proceed with the project!
