Hello,

I attended the two sessions you held in Fort St. John and did speak on Monday, October 2, 2017. Since then, I have been mulling over several bits of information that I have heard or read about concerning the cost of Site C.

1. Years ago when the issue of the stability of the site of the dam was first questioned, I was told, if you have enough money, you can make anything work. After listening to Mr. James Little and Mr. Arthur Hadland I do not think that any amount of money will do the job. How much money should the citizens of B. C. be asked to put into this project especially now that we hear that the cost has gone up?

2. I read a letter in the Times Colonist in which a lady stated that B. C. Hydro was paying companies NOT to produce power. Is this true? Why spend the money on Site C? Does the right hand know what the left hand is doing?

3. Also, an item came into my inbox that said that Woodfibre LNG near Squamish was paid \$158.00 per megawatt hour when they produced the power and sold it to B. C. Hydro but when they purchased power from Hydro, they pay only \$54.00 a megawatt hour. Why are B. C. ratepayers and taxpayer subsidizing private companies?

Thank you for your dedication to listening and reading all the data that has been submitted.

Sincerely,

Ruth Ann Darnall
